Summary

Computer Science student with strong experience in building scalable backend systems, **Java microservices**, REST APIs, and full-stack applications using **Spring Boot**, React, SQL and Docker.

Technical Skills

Languages: Java, JavaScript, Python

Backend: Spring Boot, Spring Security, JPA, REST APIs, Microservices

Frontend: React.js, CSS, HTML

Databases: MySQL, PostgreSQL, MongoDB

Tools: Docker, Kafka, RabbitMQ, Git

Core Concepts: OOP, DBMS, Operating Systems, Data Structures

Experience

Suvidha Foundation

Mumbai, India

Web Developer Intern

Apr 2025 – Jun 2025

- Improved website load speed by **25%** through UI optimization, responsive layouts, and lazy loading techniques.
- Built reusable **React** components that reduced development effort and improved maintainability.
- Integrated REST APIs and optimized state management to reduce unnecessary client-server requests.
- Enhanced mobile responsiveness and cross-browser compatibility for better user experience.

Projects

AI Insurance Fraud Detection System | *React, Spring Boot, Kafka, PostgreSQL, Docker* | [Link](#) 2026

- Built an AI-powered insurance fraud detection platform using microservices architecture and Kafka.
- Implemented secure JWT authentication, protected APIs, and role-based access using Spring Security.
- Integrated AI fraud analysis to detect suspicious claims and generate automated fraud scores.
- Developed a live analytics dashboard with real-time fraud monitoring and claim visualization.
- Containerized backend services using Docker Compose for scalable deployment and testing.

AI-Powered Smart Energy Monitoring Platform | *Spring Boot, Spring AI, Kafka, Ollama* | [Link](#) 2026

- Developed a scalable microservices platform for monitoring real-time electricity consumption.
- Built independent services for device management, analytics, and alert processing using Spring Boot.
- Integrated Apache Kafka for reliable asynchronous communication between distributed services.
- Implemented AI-powered energy insights using Spring AI integrated with Ollama (LLaMA 3).
- Containerized all services using Docker Compose for simplified deployment and testing.

Scalable URL Shortener | *Spring Boot, PostgreSQL, Docker* | [Link](#) 2026

- Developed a secure URL shortening platform with authentication and role-based access.
- Implemented rate limiting and request validation to improve API security and reliability.
- Built analytics features to track click counts, traffic trends, and link performance.
- Designed REST APIs for efficient URL generation, redirection, and usage management.
- Containerized the application using Docker for consistent deployment environments.

Education

Vidyalankar Institute of Technology

Mumbai, India

B.Tech in Computer Science Engineering | GPA: 8.5/10

Expected 2026

Achievements

- Solved **150+** Data Structures and Algorithms problems on LeetCode.
- Strong understanding of backend development, clean code practices, and problem solving.
- Built multiple end-to-end projects using **Java**, Spring Boot, React, SQL, and Docker.
